## ★ INCLUDE TAGS

### get\_header

Includes the header.php template file from your current theme's directory.

```
<?php get_header( $name ); ?>
```

*\$name* {s}

### get\_sidebar

Includes the sidebar.php template file from your current theme's directory.

```
<?php get_sidebar( $name ); ?>
```

*\$name* {s}

### get\_search\_form

Display search form using searchform.php theme file.

```
<?php get_search_form(); ?>
```

### comments\_template

Loads the comment template. For use in single post and page displays.

```
<?php comments_template( $file, $separate_comments ); ?>
```

*\$file* {s} / *\$separate\_comments* {b}

### get\_footer

Includes the footer.php template file from your current theme's directory.

```
<?php get_footer( $name ); ?>
```

*\$name* {s}

## ★ BLOG INFO TAGS

### bloginfo

Displays information about your blog, mostly gathered from the information you supply in your User Profile and General Options from the WordPress Administration panels

```
<?php bloginfo( $show ); ?>
```

*\$show* {s} / admin\_email | atom\_url | charset | comments\_atom\_url | comments\_rss2\_url | description | url | html\_type | language | name | pingback\_url | rdf\_url | rss2\_url | rss\_url | siteurl | stylesheet\_directory | stylesheet\_url | template\_directory | template\_url | text\_direction | version | wpurl

### bloginfo\_rss

Displays information about your blog, mostly gathered from the information you supply in Users > Your Profile and General Options from the WordPress Administration Panels

```
<?php bloginfo_rss( $show ); ?>
```

*\$show* {s} / name | description | url | rdf\_url | rss\_url | rss2\_url | atom\_url | comments\_rss2\_url | pingback\_url | admin\_email | charset | version | html\_type | wpurl | template\_url | template\_directory | stylesheet\_url | stylesheet\_directory

### get\_bloginfo

The get\_bloginfo() function returns information about your blog which can then be used elsewhere in your PHP code.

```
<?php $bloginfo = get_bloginfo( $show ); ?>
```

*\$show* {s} / name | description | url | *home* | *siteurl* | description | wpurl | rdf\_url | rss\_url | rss2\_url | atom\_url | comments\_rss2\_url | pingback\_url | stylesheet\_url | stylesheet\_directory | template\_directory | template\_url | admin\_email | charset | version | html\_type

### get\_bloginfo\_rss

RSS container for the bloginfo function.

```
<?php get_bloginfo_rss( $show ) ?> {s}
```

*\$show* {s} / name | description | url | rdf\_url | rss\_url | rss2\_url | atom\_url | comments\_rss2\_url | pingback\_url | admin\_email | charset | version | html\_type | wpurl | template\_url | template\_directory | stylesheet\_url | stylesheet\_directory

## ★ LISTS AND DROPDOWN TAGS

### wp\_list\_authors

Displays a list of the blog's authors (users), and if the user has authored any posts, the author name is displayed as a link to their posts.

```
<?php wp_list_authors( $args ); ?>
```

*\$args* / optioncount | exclude\_admin | show\_fullname | hide\_empty | echo | feed | feed\_image | style | html

### wp\_list\_categories

Displays a list of Categories as links.

```
<?php wp_list_categories( $args ); ?>
```

*\$args* / show\_option\_all | orderby | order | show\_last\_update | style | show\_count | hide\_empty | use\_desc\_for\_title | child\_of | feed | feed\_type | feed\_image | exclude | exclude\_tree | include | current\_category | hierarchical | title\_li | number | echo | depth

### wp\_list\_pages

Displays a list of WordPress Pages as links.

```
<?php wp_list_pages( $args ); ?>
```

*\$args* / depth | show\_date | date\_format | child\_of | exclude | include | title\_li | echo | authors | sort\_column | link\_before | link\_after | exclude\_tree

### wp\_list\_bookmarks

Displays bookmarks found in the Administration > Links panel.

```
<?php wp_list_bookmarks( $args ); ?>
```

*\$args* / orderby | order | limit | category | exclude\_category | category\_name | hide\_invisible | show\_updated | echo | categorize | title\_li | title\_before | title\_after | category\_orderby | category\_order | class | category\_before | category\_after

### wp\_list\_comments

Displays all comments for a post or Page based on a variety of parameters including ones set in the administration area.

```
<?php wp_list_comments( $args ); ?>
```

*\$args* / walker | max\_depth | style | callback | end-callback | type | page | per\_page | avatar\_size | reverse\_top\_level | reverse\_children

### wp\_get\_archives

This function displays a date-based archives list in the same way as get\_archives(). The only difference is that parameter arguments are given to the function in query string format.

```
<?php wp_get_archives( $args ); ?>
```

*\$args* / type | limit | format | before | after | show\_post\_count | echo

### wp\_page\_menu

Displays a list of WordPress Pages as links, and affords the opportunity to have Home added automatically to the list of Pages displayed.

```
<?php wp_page_menu( $args ); ?>
```

*\$args* / sort\_column | menu\_class | include | echo | show\_home | link\_before | link\_after

### wp\_dropdown\_pages

Displays a list of pages in a select (i.e dropdown) box with no submit button.

```
<?php wp_dropdown_pages( $args ); ?>
```

*\$args* / depth | child\_of | selected | echo | name | show\_option\_none | exclude | exclude\_tree

### wp\_dropdown\_categories

Displays a list of categories in a select (i.e dropdown) box with no submit button.

```
<?php wp_dropdown_categories( $args ); ?>
```

*\$args* / show\_option\_all | show\_option\_none | orderby | order | show\_last\_update | show\_count | hide\_empty | child\_of | exclude | echo | selected | hierarchical | name | class | depth

### wp\_dropdown\_users

Create dropdown HTML content of users.

```
<?php wp_dropdown_users( $args ); ?>
```

*\$args* / show\_option\_all | show\_option\_none | orderby | order | include | exclude | multi | show | echo | selected | name | class

★ LOGIN / LOGOUT TAGS

**is\_user\_logged\_in**

This Conditional Tag checks if the current visitor is logged in. This is a boolean function, meaning it returns either TRUE or FALSE.

```
<?php if ( is_user_logged_in() ) { ... } ?>
```

**wp\_login\_url**

This Template Tag returns the URL that allows the user to log in to the site.

```
<?php echo wp_login_url( $redirect ); ?>
```

*\$redirect {s}*

**wp\_logout\_url**

This Template Tag returns the URL that allows the user to log out to the site.

```
<?php echo wp_logout_url( $redirect ); ?>
```

*\$redirect {s}*

**wp\_lostpassword\_url**

This Template Tag returns the URL that allows the user to retrieve the lost password.

```
<?php echo wp_lostpassword_url( $redirect ); ?>
```

*\$redirect {s}*

**wp\_logout**

Log the current user out, by destroying the current user session.

```
<?php wp_logout(); ?>
```

**wp\_loginout**

Displays a login link, or if a user is logged in, displays a logout link. An optional, redirect argument can be used to redirect the user upon login or logout.

```
<?php wp_loginout( $redirect ); ?>
```

*\$redirect {s}*

**wp\_register**

This tag displays either the "Register" link to users that are not logged in or the "Site Admin" link if a user is logged in.

```
<?php wp_register( $before, $after ); ?>
```

*\$before {s} / \$after {s}*

★ POST TAGS

**the\_ID**

Displays the numeric ID of the current post.

```
<?php the_ID(); ?>
```

**the\_title**

Displays or returns the title of the current post.

```
<?php the_title( $before, $after, $display );?>
```

*\$before {s} / \$after {s} / \$display {b}*

**the\_title\_rss**

Displays the title of the current post, formatted for RSS.

```
<?php the_title_rss(); ?>
```

**the\_title\_attribute**

Displays or returns the title of the current post. It somewhat duplicates the functionality of the\_title(), but provides a 'clean' version of the title by stripping HTML tags and converting certain characters (including quotes) to their character entity equivalent; it also uses query-string style parameters. This tag must be within The Loop.

```
<?php the_title_attribute( $before, $after, $display );?>
```

*\$before {s} / \$after {s} / \$display {b}*

**single\_post\_title**

Displays or returns the title of the post when on a single post page (permalink page).

```
<?php single_post_title( $prefix, $display ); ?>
```

*\$prefix {s} / \$display {b}*

**the\_content**

Displays the contents of the current post.

```
<?php the_content( $more_link_text, $strip_teaser, $more_file );?>
```

*\$more\_link\_text {s} / \$strip\_teaser {b} / \$more\_file {s}*

**the\_content\_rss**

Displays the content of the current post formatted for RSS.

```
<?php the_content_rss( 'more_link_text', 'strip_teaser', 'more_file', 'cut', 'encode_html' ); ?>
```

*\$more\_link\_text {s} / \$strip\_teaser {b} / \$more\_file {s} / \$cut {int} / \$encode\_html {int}*

**the\_excerpt**

Displays the excerpt of the current post with [...] at the end, which is not a "read more" link.

```
<?php the_excerpt(); ?>
```

**the\_excerpt\_rss**

Displays the excerpt of the current post formatted for RSS.

```
<?php the_excerpt_rss(); ?>
```

**wp\_link\_pages**

Displays page-links for paginated posts (i.e. includes the <!--nextpage--> Quicktag one or more times).

```
<?php wp_link_pages( $args ); ?>
```

*\$args / before | after | link\_before | link\_after | next\_or\_number | nextpagelink | previouspagelink | pagelink | more\_file | echo*

**posts\_nav\_link**

Displays links for next and previous pages. Useful for providing "paged" navigation of index, category and archive pages.

```
<?php posts_nav_link( 'sep', 'prelabel', 'nxtlabel' ); ?>
```

*'sep' {s} / 'prelabel' {s} / 'nxtlabel' {s}*

**next\_post\_link**

Used on single post permalink pages, this template tag displays a link to the next post which exists in chronological order from the current post.

```
<?php next_post_link( 'format', 'link', 'in_same_cat', 'excluded_categories' ); ?>
```

*'format' {s} / 'link' {s} / 'in\_same\_cat' {b} / 'excluded\_categories' {s}*

**next\_posts\_link**

This creates a link to the previous posts. Yes, it says "next posts," but it's named that just to confuse you. It assumes that your posts are displaying in reverse chronological order (most recent posts first) causing the next page to show posts from earlier in the timeline.

```
<?php next_posts_link( $label, $max_pages ); ?>
```

*\$label {s} / \$max\_pages {int}*

**previous\_post\_link**

Used on single post permalink pages, this template tag displays a link to the previous post which exists in chronological order from the current post.

```
<?php previous_post_link( 'format', 'link', 'in_same_cat', 'excluded_categories' ); ?>
```

*'format' {s} / 'link' {s} / 'in\_same\_cat' {b} / 'excluded\_categories' {s}*

**previous\_posts\_link**

This creates a link to the next posts. Yes, it says "previous posts," but it's named that just to confuse you. It assumes that your posts are displaying in reverse chronological order (most recent posts first) causing the previous page to show posts from later in the timeline.

```
<?php previous_posts_link( $label, $max_pages ); ?>
```

*\$label {s} / \$max\_pages {int}*

**next\_image\_link**

This creates a link to the next image attached to the current post.

```
<?php next_image_link( [string $size = 'thumbnail'], [string $text = false] ); ?>
```

**previous\_image\_link**

This creates a link to the previous image attached to the current post.

```
<?php previous_image_link( [string $size = 'thumbnail'], [string $text = false] ); ?>
```

**sticky\_class**

Displays the sticky post class on a post if applicable.

```
<?php sticky_class(); ?>
```

**the\_category**

Displays a link to the category or categories a post belongs to.

```
<?php the_category( $separator, $parents ); ?>
```

*\$separator {s} / \$parents {s}*

**the\_category\_rss**

Displays the name of the category or categories a post belongs to in RSS format.

```
<?php the_category_rss( $type ) ?> {s}
```

**the\_tags**

This template tag displays a link to the tag or tags a post belongs to.

```
<?php the_tags( $before, $separator, $after );?>
```

*\$before {s} / \$separator {s} / \$after {s}*

**the\_meta**

Displays an unordered list of meta "key:value" pairs, or the post-meta, for the current post.

```
<?php the_meta(); ?>
```

★ COMMENTS TAGS

**wp\_list\_comments**

Displays all comments for a post or Page based on a variety of parameters including ones set in the administration area.

```
<?php wp_list_comments( $args ); ?>
```

*\$args* / walker | max\_depth | style | callback | end-callback | type | page | per\_page | avatar\_size | reverse\_top\_level | reverse\_children

**comments\_number**

Displays the total number of comments, Trackbacks, and Pingbacks for a post.

```
<?php comments_number('zero', 'one', 'more');?>
```

'zero' {s} / 'one' {s} / 'more' {s}

**comments\_link**

Displays the URL to a post's comments.

```
<?php comments_link(); ?>
```

**\* comments\_rss\_link**

This function has been deprecated, please use `post_comments_feed_link()`.

```
<?php comments_rss_link('text', 'file'); ?>
```

'text' {s} / 'file' {s}

**comments\_popup\_script**

Outputs the JavaScript code for a comments popup window.

```
<?php comments_popup_script(width, height);?>
```

width {int} / height {int}

**comments\_popup\_link**

Displays a link to the comments popup window if `comments_popup_script()` is used, otherwise it displays a normal link to comments.

```
<?php comments_popup_link('zero', 'one', 'more', 'CSSclass', 'none'); ?>
```

'zero' {s} / 'one' {s} / 'more' {s} / 'CSSclass' {s} / 'none' {s}

**comment\_ID**

Displays the numeric ID of a comment.

```
<?php comment_ID(); ?>
```

**comment\_id\_fields**

Generates two hidden inputs for the comment form to identify the `comment_post_ID` and `comment_parent` for threaded comments.

```
<?php comment_id_fields(); ?>
```

**comment\_author**

Displays the comment author name; that is, the one supplied by the commenter.

```
<?php comment_author(); ?>
```

**comment\_author\_link**

Displays the comment author's name linked to his/her URL, if one was provided.

```
<?php comment_author_link(); ?>
```

**comment\_author\_email**

Displays the comment author's email address, not linked.

```
<?php comment_author_email(); ?>
```

**comment\_author\_email\_link**

Displays the comment author's email address, as a mailto link.

```
<?php comment_author_email_link('linktext', 'before', 'after'); ?>
```

'linktext' {s} / 'before' {s} / 'after' {s}

**comment\_author\_url**

Displays the comment author's URL (usually their web site), not linked.

```
<?php comment_author_url(); ?>
```

**comment\_author\_url\_link**

Displays the comment author's URL (usually their web site), linked, if one was provided.

```
<?php comment_author_url_link('linktext', 'before', 'after'); ?>
```

'linktext' {s} / 'before' {s} / 'after' {s}

**comment\_author\_IP**

Displays the comment author's IP address.

```
<?php comment_author_IP(); ?>
```

**comment\_type**

Displays the type of comment (regular comment, Trackback or Pingback) a comment entry is.

```
<?php comment_type('comment', 'trackback', 'pingback'); ?>
```

'comment' {s} / 'trackback' {s} / 'pingback' {s}

**comment\_text**

Displays the text of a comment.

```
<?php comment_text(); ?>
```

**comment\_excerpt**

Displays an excerpt (maximum of 20 words) of a comment's text.

```
<?php comment_excerpt(); ?>
```

**comment\_date**

Displays the date a comment was posted.

```
<?php comment_date('d'); ?>
```

**comment\_time**

Displays the time a comment was posted.

```
<?php comment_time('d'); ?>
```

**comment\_form\_title**

Displays text based on comment reply status.

```
<?php comment_form_title('noreplytext', 'replytext', 'linktoparent' );?>
```

'noreplytext' {s} / 'replytext' {s} / 'linktoparent' {s}

**comment\_author\_rss**

Displays the comment author's name formatted for RSS.

```
<?php comment_author_rss(); ?>
```

**comment\_text\_rss**

Displays the text of a comment formatted for RSS.

```
<?php comment_text_rss(); ?>
```

**get\_avatar**

Retrieve the avatar for a user who provided a user ID or email address.

```
<?php echo get_avatar( $id_or_email, $size, $default, $alt ); ?>
```

*\$id\_or\_email* {int/s/obj} / *\$size* {int} / *\$default* {s} / *\$alt* {s}

**permalink\_comments\_rss**

Displays the permalink to the post to which a comment belongs, formatted for RSS.

```
<?php permalink_comments_rss(); ?>
```

**comment\_reply\_link**

Displays a link that lets users post a comment in reply to a specific comment.

```
<?php comment_reply_link(array_merge( $args, array('reply_text' => 'Reply', 'add_below' => $add_below, 'depth' => $depth, 'max_depth' => $args['max_depth']))); ?>
```

**cancel\_comment\_reply\_link**

Displays a link which cancels the replying to a previous comment (a nested comment) and resets the comment form back to the default state.

```
<?php cancel_comment_reply_link('text'); ?>
```

'text' {s}

**previous\_comments\_link**

This creates a link to the previous comments page containing older comments.

```
<?php previous_comments_link( 'Label' ); ?>
```

Label' {s}

**next\_comments\_link**

This creates a link to the next comments page containing newer comments.

```
<?php next_comments_link('Label', 'Max number of pages (default 0)');?>
```

'Label' {s} / 'Max number of pages (default 0)' {int}

**paginate\_comments\_links**

Generate a new way to list the paged comments in the comment template. Instead of using Previous or Next Comments links, it displays a full list of comment pages using numeric indexes.

```
<?php paginate_comments_links( $args ); ?>
```

*\$args* / base | format | total | current | echo | add\_fragment

★ CATEGORY TAGS

**the\_category**

Displays a link to the category or categories a post belongs to.

```
<?php the_category( $separator, $parents ); ?>
```

*\$separator {s} / \$parents {s}*

**the\_category\_rss**

Displays the name of the category or categories a post belongs to in RSS format.

```
<?php the_category_rss( $type ) ?>
```

*\$type {s}*

**single\_cat\_title**

Displays or returns the category title for the current page.

```
<?php single_cat_title( $prefix, $display ); ?>
```

*\$prefix {s} / \$display {s}*

**category\_description**

Returns the description of a category.

```
<?php echo category_description( $category ); ?>
```

*\$category {s}*

**wp\_dropdown\_categories**

Displays a list of categories in a select (i.e dropdown) box with no submit button.

```
<?php wp_dropdown_categories( $args ); ?>
```

*\$args / show\_option\_all | show\_option\_none | orderby | order | show\_last\_update | show\_count | hide\_empty | child\_of | exclude | echo | selected | hierarchical | name | class | depth*

**wp\_list\_categories**

Displays a list of Categories as links.

```
<?php wp_dropdown_categories( $args ); ?>
```

*\$args / show\_option\_all | orderby | order | show\_last\_update | style | show\_count | hide\_empty | use\_desc\_for\_title | child\_of | feed | feed\_type | feed\_image | exclude | exclude\_tree | include | current\_category | hierarchical | title\_li | number | echo | depth*

★ TAG TAGS

**the\_tags**

This template tag displays a link to the tag or tags a post belongs to.

```
<?php the_tags( $before, $separator, $after ); ?>
```

*\$before {s} / \$separator {s} / \$after {s}*

**tag\_description**

First available with WordPress Version 2.8, this template tag returns the description of a tag.

```
<?php tag_description( $tagID ); ?>
```

*\$tagID / {s}*

**single\_tag\_title**

Displays or returns the tag title for the current page.

```
<?php single_tag_title( $prefix, $display ); ?>
```

*\$prefix {s} / \$display {s}*

**wp\_tag\_cloud**

Available with WordPress Version 2.3, this template tag wp\_tag\_cloud displays a list of tags in what is called a 'tag cloud', where the size of each tag is determined by how many times that particular tag has been assigned to posts.

```
<?php wp_tag_cloud( $args ); ?>
```

*\$args / smallest | largest | unit | number | format | separator | orderby | order | exclude | include | link | taxonomy | echo*

**wp\_generate\_tag\_cloud**

Returns an HTML string that makes a tag cloud.

```
<?php wp_tag_cloud( $tags, $args ); ?>
```

*\$args / smallest | largest | unit | number | format | separator | orderby | order | topic\_count\_text\_callback | topic\_count\_scale\_callback | filter*

★ AUTHOR TAGS

**the\_author**

The author of a post can be displayed by using this Template Tag.

```
<?php the_author(); ?>
```

**the\_author\_link**

This tag displays a link to the Website for the author of a post.

```
<?php the_author_link(); ?>
```

**the\_author\_posts**

Displays the total number of posts an author has published.

```
<?php the_author_posts(); ?>
```

**the\_author\_posts\_link**

Displays a link to all posts by an author.

```
<?php the_author_posts_link(); ?>
```

**the\_author\_meta**

The the\_author\_meta Template Tag displays the desired meta data for a user.

```
<?php the_author_meta( $field, $userID ); ?>
```

*\$field / user\_login | user\_pass | user\_nicename | user\_email | user\_url | user\_registered | user\_activation\_key | user\_status | display\_name | nickname | first\_name | last\_name | description | jabber | aim | yim | user\_level | user\_firstname | user\_lastname | user\_description | rich\_editing | comment\_shortcuts | admin\_color | plugins\_per\_page | plugins\_last\_view | ID*

*\$userID / {int}*

**wp\_list\_authors**

Displays a list of the blog's authors (users), and if the user has authored any posts, the author name is displayed as a link to their posts.

```
<?php wp_list_authors( $args ); ?>
```

*\$args / optioncount | exclude\_admin | show\_fullname | hide\_empty | echo | feed | feed\_image | style | html*

**wp\_dropdown\_users**

Create dropdown HTML content of users.

```
<?php wp_dropdown_users( $args ); ?>
```

*\$args / show\_option\_all | show\_option\_none | orderby | order | include | exclude | multi | show | echo | selected | name | class*

★ DATE AND TIME TAGS

**the\_time**

Displays the time of the current post.

```
<?php the_time('d'); ?>
```

**the\_date**

isplays or returns the date of a post, or a set of posts if published on the same day.

```
<?php the_date('format', 'before', 'after', echo); ?>
```

*'format' {s} / 'before' {s} / 'after' {s} / echo {b}*

**the\_date\_xml**

Displays the date of the post in YYYY-MM-DD format (ex: 2004-09-24).

```
<?php the_date_xml(); ?>
```

**the\_modified\_time**

This tag displays the time (and date) a post was last modified and is similar to the functionality of the\_time(), which displays the time (and date) a post was created.

```
<?php the_modified_time('d'); ?>
```

**the\_modified\_date**

This tag displays the date (and time) a post was last modified. This tag works just like the\_modified\_time(), which also displays the time/date a post was last modified.

```
<?php the_modified_date('d'); ?>
```

**the\_modified\_author**

The author who last modified a post can be displayed by using this Template Tag.

```
<?php the_modified_author(); ?>
```

**single\_month\_title**

Displays or returns the month and year title for the current page. This tag only works when the m or archive month argument has been passed by WordPress to the current page (this occurs when viewing a monthly archive page).

```
<?php single_month_title( $prefix, $display ) ?>
```

*\$prefix {s} / \$display {s}*

## ★ EDIT LINK TAGS

**edit\_post\_link**

Displays a link to edit the current post, if a user is logged in and allowed to edit the post.

```
<?php edit_post_link
( $link, $before, $after, $post ); ?>
```

*\$link {s} / \$before {s} / \$after {s} / \$post {int}*

**edit\_comment\_link**

Displays a link to edit the current comment, if the user is logged in and allowed to edit the comment.

```
<?php edit_comment_link
( $link, $before, $after ); ?>
```

*\$link {s} / \$before {s} / \$after {s}*

**edit\_tag\_link**

Displays a link to edit the current tag, if the user is logged in and allowed to edit the tag.

```
<?php edit_tag_link
( $link, $before, $after, $tag ); ?>
```

*\$link {s} / \$before {s} / \$after {s} / \$tag {int}*

**edit\_bookmark\_link**

Displays a link to edit the current bookmark, if the user is logged in and allowed to edit the bookmark.

```
<?php edit_bookmark_link
( $link, $before, $after, $bookmark ); ?>
```

*\$link {s} / \$before {s} / \$after {s} / \$bookmark {int}*

## ★ TRACKBACK TAGS

**trackback\_url**

Displays or returns the trackback URL for the current post.

```
<?php trackback_url( display ); ?>
```

*display {b}*

**trackback\_rdf**

Outputs the trackback RDF information for a post.

```
<?php trackback_rdf(); ?>
```

## ★ PERMALINK TAGS

**permalink\_anchor**

Outputs a permalink anchor identifier or id (<a id="...">) for a post. This is useful for linking to a particular post on a page displaying several posts, such as an archive page.

```
<?php permalink_anchor('type'); ?>
```

*'type' {s}*

**get\_permalink**

Returns the permalink to a post for use in PHP. It does NOT display the permalink and can be used outside of The Loop.

```
<?php $permalink = get_permalink(id); ?>
```

*id {int}*

**the\_permalink**

Displays the URL for the permalink to the post currently being processed in The Loop.

```
<?php the_permalink(); ?>
```

**permalink\_single\_rss**

Displays the permalink for the current post, formatted for syndication feeds such as RSS or Atom.

```
<?php permalink_single_rss('file'); ?>
```

*'file' {s}*

## ★ LINKS MANAGER TAGS

**wp\_list\_bookmarks**

Displays bookmarks found in the Administration > Links panel.

```
<?php wp_list_bookmarks( $args ); ?>
```

*\$args / orderby | order | limit | category | exclude\_category | category\_name | hide\_invisible | show\_updated | echo | categorize | title\_li | title\_before | title\_after | category\_orderby | category\_order | class | category\_before | category\_after*

**get\_bookmarks**

This function returns an array of bookmarks found in the Administration > Blogroll > Manage Blogroll panel.

```
<?php get_bookmarks( $args ); ?>
```

*\$args / orderby | order | limit | category | category\_name | hide\_invisible | show\_updated | include | exclude | search*

**get\_bookmark**

Retrieve Bookmark data based on bookmark link ID.

```
<?php get_bookmark
( $bookmark, $output, $filter ) ?>
```

*\$bookmark {int} / \$output {s} / \$filter {s}*

## ★ QUERY TAGS

**get\_posts**

This is a simple tag for creating multiple loops.

```
<?php get_posts('arguments'); ?>
```

*\$numberposts {int} / \$offset {int} / \$category {int} / \$category\_name {s} / \$tag {s} /*

*\$orderby {s} (author | category | content | date | ID | menu\_order | mime\_type | modified | name | parent | password | rand | status | title | type)*

*\$order {s} / \$include {s} / \$exclude {s} / \$meta\_key {s} / \$meta\_value {s}*

*\$post\_type {s} (post | page | attachment | any)*

*\$post\_status {s} (publish | private | draft | future | inherit | blank)*

*\$post\_parent {int} / \$nopaging {b}*

**query\_posts**

Query\_posts can be used to control which posts show up in The Loop. It accepts a variety of parameters in the same format as used in your URL (e.g. p=4 to show only post of ID number 4).

```
<?php
//The Query
query_posts('arguments');
//The Loop
if ( have_posts() ) : while ( have_posts() ) :
the_post();
..
endwhile; else:
..
endif;
//Reset Query
wp_reset_query();
?>
```

**T Arguments include:** Category Parameters, Tag Parameters, Author Parameters, Post & Page Parameters, Sticky Post Parameters, Time Parameters, Pagination Parameters, Offset Parameter, Orderby Parameters, Order Parameters, Custom Field Parameters, Combining Parameters.

WORDPRESS WordPress is a state-of-the-art publishing platform with a focus on aesthetics, web standards, and usability. WordPress is both free and priceless at the same time. • <http://wordpress.org>

## ★ TITLE

**wp\_title**

Displays or returns the title of the page.

```
<?php wp_title( $sep, $echo, $seplocation ); ?>
```

*\$sep {s} / \$echo {s} / \$seplocation {s}*

**single\_post\_title**

Displays or returns the title of the post when on a single post page (permalink page).

```
<?php single_post_title( $prefix, $display ); ?>
```

*\$prefix {s} / \$display {s}*

**single\_cat\_title**

Displays or returns the category title for the current page.

```
<?php single_cat_title( $prefix, $display ); ?>
```

*\$prefix {s} / \$display {s}*

**single\_tag\_title**

Displays or returns the tag title for the current page.

```
<?php single_tag_title( $prefix, $display ); ?>
```

*\$prefix {s} / \$display {s}*

**single\_month\_title**

This tag displays the date (and time) a post was last modified. This tag works just like the\_modified\_time(), which also displays the time/date a post was last modified.

```
<?php single_month_title( $prefix, $display ); ?>
```

*\$prefix {s} / \$display {s}*

**the\_search\_query**

Displays the search query for the current request, if a search was made.

```
<?php the_modified_time('d'); ?>
```
